Dear experts,

The WHO library finalized the search that we requested. You will see below that they did only a manual deduplication.

Let me know if you have questions/comments.

Best,

Philippe

Hello Philippe,

Tomas asked me to send you these CSV files to you **URGENTLY**. We have done only **AUTOMATIC** deduplication using the following reference managers: ***EndNote*** and ***Synthesis***.

For your information, we were in the process of doing manual deduplication which was really time consuming and at this point we stop this process.

Diazinon-Cancer-Cits – 157 references (originally 179)

Diazinon-Genotox-Cits – 99 references (originally 130)

Glyphosate-Cancer-Cits – 251 references (originally 316)

Glyphosate-Genotox-Cits – 269 references (originally 372)

Malathion-Cancer-Cits – 227 references (originally 263)

Malathion-Genotox-Cits – 182 references (originally 249)

We will keep all the source files and the exported files.

Regards,

Jose GARNICA

Hi Tomas

Yes I think I understand and will forward the files to the relevant experts. Please also copy Enzo who will upload the files on the WHO share point as I am currently in China.

Best regards

Philippe

Hi José,

Once you have completed the de-duplicating, the files can be sent to Philippe Verger who can then forward the appropriate files to the right person for Review.

Dear Philippe,

I hope that all the files are clear as to whom to send. Let me know if you have any questions.

Thanks.

As of today, I will have very limited access to internet .

Hello Tomas,

I finally had the time to work on this. I'm still in the office.

I have imported all citations into EndNote.

Glyphosate-Genotox-Cits – 193 + 179

Glyphosate-Cancer-Cits – 180 + 136

Diazinon-Genotox-Cits – 62 + 68

Diazinon-Cancer-Cits – 180 + 136

Malathion-Genotox-Cits – 122 + 127

Malathion-Cancer-Cits – 112 + 151

Remarks: the first batch is **PUBMED (TXT)** – filter applied: PubMed(NML)) and second batch is **Embase (RIS)** – filter applied: Refman RIS). A total of 1646 references were imported.

After having imported all citations, my question is:

Option 1 - Do I have to de dup the whole batch (1646 references) and generate 1 single excel file?

Option 2 - Do I have to import the TXT and RIS files and de dup them in groups (e.g. Glyphosate-Genotox-Cits – 193 + 179 (372 refs) – import the two files, de dup these 372 references and create an excel file for this group?)

Sorry but it is not clear for me. After having imported all references, I think you meant the second option.

Regards,

Jose GARNICA

Hi Jose,

I will be sending you embase and pubmed files to merge and create files in EndNote to deduplicate and then to export into separate excel files.

There are the groupings:

Glyphosate-Genotox-Cits

Glyphosate-Cancer-Cits

Diazinon-Genotox-Cits

Diazinon-Cancer-Cits

Malathion-Genotox-Cits

Malathion-Cancer-Cits

I will send the files in 6 emails

Thanks Tomas
